The quality and standard of tatami flooring

These floors have a high quality level. The raw materials used in them are the best raw materials and quality colors are used in their production. All the necessary points and standards are observed in their production and in addition to high precision during production, the product is also evaluated after production so that a product without defects and standard is available to the consumer. The quality of these floor coverings is so high that this product is a popular product for export in addition to meeting domestic needs. This product is healthy and compatible with the skin and has a health certificate and a standard certificate.

Tatami flooring factory

foamiran tatami flooring factory is a large and well-equipped factory that uses the latest and most advanced machines to produce tatami. High-quality and hygienic raw materials are transformed into these floors according to special formulas defined by engineers and professional experts. Also, the best available color is used for these foams.

After production, the product is reassessed for quality. All Fomiran products have health certificates and standard certificates.

Washing the tatami floor

These floor coverings are waterproof and can be easily washed using water or a damp cloth. Because it is waterproof, water does not penetrate into the flooring and remains on its surface, which prevents the flooring from rotting.

20 mm bafoam tatami for children and teenagers and 25 and 30 mm tatami can support 50 to 80 kg weight. But the 45mm tatami supports 80 to 140 kg of weight.
